## High End Optical Parametric Oscillator

### primoScan Specification

The primoScan is GWU's modular high-end OPO, available in **broadband and midband configuration**. Pumped at 355 nm it provides widest, continuous tuning from the **UV** range, across the **visible** spectrum up to **infrared** wavelengths with highest output energies. The fast-switching capability allows for **changing its wavelength from shot-to-shot** across the entire range with < 100 ms shifting time. The modular design of the primoScan ensures the **optimum versatility** for almost any application. Additional features, e. g. a common port for all wavelengths, are available. All options, including UV generation, are **integrated in one single box**.

The broadband (/BB) version of the primoScan offers an **extraordinary efficiency**, allowing for the **highest output energy** on the market together with a wide tunability across the visible to the mid-IR spectral range.

The midband type OPO is employing the **ultra-low divergence (/ULD)** technology, providing an excellent beam quality, highest UV efficiencies and **gap-free tuning** from 190 nm to 2700 nm.

Following GWU's design philosophy, the OPOs of the primoScan series are using a **soft pumping scheme** with low fluence, ensuring **maximum reliability**. Moreover, the BBO crystals are coated with an advanced "p-coating" – a layer that protects the crystal surface from degradation due to environmental effects for **maximum lifetime**. Our advanced optical and mechanical design grants for optimum performance and is virtually maintenance-free.

### Features and Benefits

Fully integrated midband and broadband OPO

Ultra-low divergence version available

Highest UV efficiency

Widest tuning range  
190-2700 nm

Single output port for entire tuning range

Fully automated control standard

Fast shot-to-shot wavelength switching

Soft pumping scheme for high reliability and long lifetime

#### Applications

Material Analysis

Laser ind. fluorescence

Combustion studies

Remote sensing

Multiphoton interactions

Medical & Biotechnology

### Notes

All specifications depend in the pump laser specifications and performance. Please contact the factory or our sales representatives for details. All specifications are subject to change without notice.

## Footnotes:

<sup>1</sup>: Output Peak  $\pm$  10 nm

<sup>4</sup>: Output Peak  $\pm$  5 nm

<sup>2</sup>: Output Peak  $\pm$  5 nm

<sup>5</sup>: Depending on UV Options

<sup>3</sup>: Losses are to be expected with additional add-ons, e. g. up to 10% losses on UV wavelengths (210 – 405 nm) when deep-UV (< 210 nm) or common port UV is added. Please contact sales for detailed specification.

<sup>6</sup>: Except deep UV < 300 nm linewidth < 8 cm<sup>-1</sup>
